an Interscience® Publication, published by **JOHN WILEY & SONS**

The *International Journal of Quantum Chemistry* (ISSN 0020-7608) is published semi-monthly with two extra issues in November by John Wiley & Sons, Inc., 605 Third Avenue, New York, New York 10158.
Copyright © 1994 John Wiley & Sons, Inc. All rights reserved. No part of this publication may be reproduced in any form or by any means, except as permitted under section 107 or 108 of the 1976 United States Copyright Act, without either the prior written permission of the publisher, or authorization through the Copyright Clearance Center, 27 Congress Street, Salem, MA 01970, (508) 744-3350, fax (508) 745-9379. Second-class postage paid at New York, NY, and at additional mailing offices.

The code and the copyright notice appearing at the bottom of the first page of an article in this journal indicate the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients, on the condition that the copier pay for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law.

This consent does not extend to the other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective work, or for resale. Such permission requests and other permission inquiries should be addressed to the Permissions Dept.

Subscription price (Volumes 49–52, 1994): $2,465.00 in the US, $2,725.00 in Canada and Mexico, $2,822.50 outside North America. All subscriptions outside US will be sent by air. Personal rate (available only if there is an institutional subscription): $125.00 in North America, $255.00 outside North America. Subscriptions at the personal rate are available only to individuals. Payment must be made in US dollars drawn on a US bank. Claims for undelivered copies will be accepted only after the following issue has been received. Please enclose a copy of the mailing label. Missing copies will be supplied when losses have been sustained in transit and where reserve stock permits. Please allow four weeks for processing a change of address. For subscription inquiries, please call (212) 850-6645.

Postmaster: Send address changes to International Journal of Quantum Chemistry, Susan Malawski, Director, Subscription Fulfillment and Distribution, Subscription Department, John Wiley & Sons, Inc., 605 Third Avenue, New York, New York 10158.

Advertising Sales: Inquiries concerning advertising should be forwarded to Roberta Frederick, Advertising Sales, John Wiley & Sons, Inc., 605 Third Ave., New York, NY 10158; (212) 850-8832. Advertising Sales, European Contact: Michael Levermore, Advertising Manager, John Wiley & Sons, Ltd., Baffins Lane, Chichester, Sussex PO 19 1UD, England.

Manuscripts should be submitted in triplicate and accompanied by an executed Copyright Transfer Form to the Editorial Office, *International Journal of Quantum Chemistry,* Quantum Chemistry Group, University of Uppsala, Box 518, S-75120, Uppsala, Sweden. Authors may also submit manuscripts to the Editorial Office, *International Journal of Quantum Chemistry,* Quantum Theory Project, Williamson Hall, University of Florida, Gainesville, Florida 32611. **Information for Contributors** appears in the first and last issue of each volume. **All other correspondence** should be addressed to the *International Journal of Quantum Chemistry,* Publisher, Interscience Division, Professional, Reference, and Trade Group, John Wiley & Sons, Inc., 605 Third Avenue, New York, New York 10158, U.S.A. The contents of this journal are indexed or abstracted in *Chemical Abstracts, Chemical Titles, Chemical Database, Current Contents/Physical, Chemical, and Earth Sciences, Research Alert (ISI), Science Citation Index (ISI),* and *SCISEARCH Database (ISI).*

This journal is printed on acid-free paper.

INTERNATIONAL JOURNAL OF QUANTUM CHEMISTRY, VOL. 50, 447–450 (1994)

Subject Index to Volumes 49 and 50

Please note that A refers to Volume 49 and B refers to Volume 50.

6-31G* basis sets, 161B

Ab initio, 3A, 383A, 397A
Ab initio calculations, 69B, 173B
Ab initio configuration interaction (CI) calculations, 279B
Ab initio electronic structure calculations, 781A
Ab initio Hartree–Fock (HF), 151B
Ab initio molecular orbital method, 279A
Ab initio SCF methods, 97A
Ab initio SCF MO calculations, 207A
Ab initio studies, 93B
A conformations, 849A
Adcomplex, 429A
Adsorbate, 429A
Al-doped superconductors, 233B
Alternate moments expansion (AMX), 101B
Ammonia dimer, 613A
Ansatz, 549A
Antiaromaticity, 273B, 575A
Atomic two-electron systems, 45A
Atoms, 299A
Atoms-in-molecules (AIM) resolution, 675A
Atom superposition and electron delocalization molecular orbital (ASED–MO) theory, 581A
Averaged Coupled-Pair Functional Theory, 135B
Averaged relativistic effective potentials (AREP), 817A

Band-gap changes, 97A
Band structures, 233B
Basis sets, 495A
B conformations, 849A
Becke–Perdew gradient-corrected functionals, 613A
Bond orders (BOS), 215A
Born–Oppenheimer Hamiltonian, 429A
Born–Oppenheimer potential function, 581A
Boron clusters, 173B
Brueckner coupled cluster (CC) method, 835A

Canonical functions, 773A
Carbon dioxide (CO_2), ground state, 409A
Catalysts, 181B
Cauchy moments, 449A
Charge transfer (CT), 805A
Charge transfer (CT) *in situ* sensitivities, 675A
Chemical bonding, 147A
Chemical hardness, 309A
Chemical reaction, 705A
Chemical signed graph theory, 639A
CH_2NO_2 radical, 781A
Co-efficients of fractional parentage (CFP), 293B
Collision-Induced Intensity, 279B
Complete neglect of differential overlap (CNDO) model Hamiltonian, 189B
Condensed mater phases, 321A
Configuration interaction (CI) wave functions, 649A
Configuration interaction over single excitations (CI-S), 601A
Conjugated circuits, 215A
Conjugated-circuit polynomials, 369B
Conjugation transformation matrix, 55B
Connected moments expansion (CMX), 101B
Constrained search density functional theory, 591A
Contraction rule, 81A
Cooper pair, 625A
Correlated determinant wave functions, 291A
Correlation-energy functional, 549A
Correlation-factor model, 549A
Coulomb integrals, 21B
Coupled-cluster (CC) calculations, 559A
Coupled-cluster techniques, 495A
Cyclization, 363A
Cycloaddition reaction, 93B

Density functionals, 591A
Density functional theory, 321A, 613A
Density functional theory (DFT), 159A, 171A, 239A, 353A, 463A, 511A, 527A
Density matrices, 291A
Density-scaling relationships, 539A
Dirichlet problem in $L_2(\Omega)$, 113B
DNA dimer units, 849A
DV–Xα method, 343A

© 1994 John Wiley & Sons, Inc.

DV-X-α cluster calculations, 849A

Eclipsed conformations, 69B
Edge-signed graph (ESG), 639A
Edge signs, 87A
Eigenfunctions, 113B
Eigenpolynomials, 81A
Eigenvalues, 773A
Eigenvectors, 185A
Electric dipole transition moments, 135B
Electron density, 291A, 299A, 321A, 539A
Electron correlations, 727A
Electron density distribution Functions, 581A
Electron donor–acceptor (EDA) complex, 463A
Electronegativity, 239A, 253A, 705A
Electronic energy-band structures, 233B
Electronic structure calculations, 511A
Electronic wave function, 463A
Electron nuclear dynamics (END), 333B
Electron-pair densities, 147A
Electron-pair distributions, 147A
Electron pairing, 625A
Electrostatic interactions, 109B
Energy-component analysis, 109B
Energy density functional, 591A
Energy functional, 371A
Energy gradient method, 3A
Equilibrium geometry, 805A
Exchange-correlation energy, 539A
Exchange-correlation energy density functional, 449A
Explicitly correlated wave functions, 477A
Extended Koopman's theorem (EKT), 649A

Feynman path integral representation, 789A
First-order Rayleigh–Schrödinger wave function, 601A
Fischer–Tropsch catalysts, 429A
Free molecules, 321A
Frequency-dependent polarizabilities, 835A
Fukui function, 675A
Full configuration interaction (FCI), 353B
Full coupled-cluster (FCC) approach, 353B
Fused aromatic systems, 383A

Gaussian 92 Program Package, 161B
Gaussian basis sets, 817A
Generalized bond orders (BOS), 215A
Generalized nonlinear Schrödinger equation, 705A
Geometry relaxation, 97A
Germanium chemical shifts, 279A
Germinal expansion of pair densities, 35A
Gradient line, 105A
Ground-state energy, 101B
Ground states, 45A

H4 model system, 353B
Hamiltonian matrix elements, 243B
Hammett equation, 309A
Harary number, 1B
Hardness, 239A
Harmonic oscillator (HO) system, 429B
Harris functional, 527A
Hartree–Fock (HF), 559A
Hartree–Fock (HF) methods, 511A
Hartree–Fock (HF) radial densities, 171A
HF atomic calculations, 817A
HH-GLF method, 395B
HMO eigenpolynomials, 81A
HOMO–LUMO energy gap, 309A
Hubbard model, 207B, 727A
Hydrogen atom (H) system, 429B
Hydrogen molecule, 333B
Hyperspherical formalism, 395B

Infrared (IR) frequencies of ESD, 161B
Intramolecular hydrogen bonds, 385B
Intrinsic reaction coordinate (IRC), 3A
Inversion barrier of NF_3^+, 151B
Ionization potentials, 649A
Isodesmic reaction procedure, 273B

Ketene cycloadditions, 21A
Kinetic energy functionals, 171A
Kinetic energy pressure, 109B
Kirchoff number, 1B
Kohn–Sham density functional theory (KS/DFT), 67A
Kohn–Sham (KS) formulation of density functional theory (DFT), 159A
Kohn–Sham theory, 449A
Kratzer molecular potential, 25A

Lagrange function, 299A
Large-N dependence of atomic energies, 657A
Large-Z dependence of atomic energies, 657A
L-ascorbic acid, 385B
Least-motion biradical mechanism, 21A
Lennard-Jones potential, 527A
Linear response function, 835A
Local hardness, 159A
Local spin density (LSD) methods, 511A
Lödin population analysis, 197A
Low-lying electronic states, 781A

Many-body Schrödinger equation, 395B
Many-fermion interacting system, 789A
Many-shell wave functions, 293B
Maximum hardness, 207A
Metal NMR Chemical Shifts, 279A
Metal π-atomic orbitals (AOS), 189B
Mills–Nixon (MN) hypothesis, 383A
MNDO–MO formalism, 805A
Möbius transformations, 11A
Moebius strip, 185A
Modified configuration interaction over single excitations (MCI-S), 601A
Modified configuration interaction over single excitations without triple excitations (MCI-S_WT), 601A
Molecular cyclicity, 1B
Molecular dynamics (MD) simulations, 527A
Molecular electrostatic charge models, 397A
Molecular electrostatic potential (MESP), 397A
Molecular graphs, 87A
Molecular integrals, 21B
Molecular orbital graph theory, 81A
Molecular orbital (MO) theory, 197B
Molecular oxygen, 279B
Molecular quantum mechanics, 185A
Molecular similarity, 35A
Molecular structure, 87A
Møller–Plesset many-body perturbation theory (MBPT), 243B
Møller–Plesset (MP) perturbation theory, 371A
Møller–Plesset perturbation theory (MP2), 151B
Monte Carlo Simulation, 401B
Morse oscillator potentials, 25A
MP2 method, 385B
MRSDCI wave functions, 781A
Multiconfigurational-self-consistent-field (MCSCF) wave functions, 649A

Narrow-band systems, 727A
n-dimensional basis set, 185A
Neocarzinostatin (NCS) analogs, 363A
Net destabilization, 575A
Nonlocal weighted density approximation (WDA), 171A
Nonvariational wave functions, 371A

Octahedral symmetry, 173B
Optimization, 45A
Orbital binding effect, 197B
Orbital bond order, 197B
Orthogonalized basis sets, 343A
Orthogonalized Hartree product (OHP) orbitals, 559A
Overlap integrals, 343A

π delocalization, 575A, 273B
π electron energy separation, 197A
P_6 isomers, 207A
Pair densities, 35A, 43B
Pair-density analysis, 147A
Pair-density sum rule, 67A
Pairon population analysis, 43B
Pauling bond orders, 215A
Perturbative polarization propagator methods, 317B
Polarization functions, 151B
Polycyclic graphs, 1B
Polynomials, 369B
Potential energy surface (PES), 105A
Potential energy surfaces, 409A
Potential energy surfaces (PES), 495A
Pseudo-orthogonal group O(*m*,*m*), 207B

Quadratic configuration interaction (CI), 151B
Quantum defect orbital (QDO) method, 411B
Quantum mechanics, 789A
Quasi-degenerate variational perturbation theory, 135B
Quasi-spin SU(2) algebra, 207B

Radial Coulomb problem, 25A
Raman frequencies of ESD, 161B
Reaction path, 105A
Redmond's formula, 293B
Reference orbitals, 559A
Relativistic quantum defect orbital (RQDO) method, 411B
Relaxed density matrices, 371A
Renormalization, 657A
Restricted open-shell Hartree–Fock (ROHF) function, 279B
Ruedenberg's algorithm, 11A

σ electron energy separation, 197A
SCF calculations, 97A
Schrödinger equation, 25A
Schrödinger operators, 113B
Screened-coulomb exchange (SCE) mode, 67A
Second-order density matrix, 549A
Second-order polarization propagator approximation (SOPPA), 317B
Second-order response properties, 371A
Second-order similarity index g_{AB}, 35A
Second quantization, 293B
Self-consistent Kohn–Sham density functional calculations, 613A
Semiempirical MNDO method, 43B
Semiempirical density functional theory (DFT), 239A

Signed edges, 87A
Simple quantum mechanical systems, 429B
Single-center expansion method, 21B
Single-reference (SR) coupled-cluster (CC) theory, 353B
Slater-type orbitals (STO), 11A, 21B
Space–time volume, 299A
Spin virial theorem, 353A
Staggered conformations, 69B
Static polarizabilities, 317B, 601A
Stepwise mechanisms, 21A
Steric hindrance, 109B
Superconductivity, 233B
Superdirect configuration interaction (Sup-CI) method, 243B
Symmetric group, 55B
Symmetric group approach (SGA), 55B

Thermochemistry parameters, 69B
Thomas–Fermi functionals, 171A
Thomas–Fermi statistical model, 657A
Time-dependent variational principle (TDVP), 333B
Time-reversal electron pair, 625A
Transition metals, 181B
Transition states (TS), 93B
Triple-zeta basis sets, 817A
Tunnel effect, 3A
Two-center exchange integrals, 11A
Two-center overlap integrals, 21B
Two coupled Schrödinger equations, 773A
Two-dimensional (2D) systems, 401B

Unitary group approach (UGA), 55B

Valence bond theory, 189B
Valence bond (VB) resonance–theoretic model, 369B
van der Waals complex, 279B
Variational molecular calculations, 477A
Variational transition-state theory, 3A
Vertex-signed graph (VSG), 639A

Wade rule, 173B
Wave functions, 45A, 649A
Weighted Kekule valence structures, 215A
Well potential, 429B
Wheland's intermediates, 383A
Wiener number, 1B

Xα method, 353A
X-ray coherent diffraction experiment, 291A
X-ray photoelectron spectroscopy (XPS), 181B

Z-expansions, 45A
